

1.4 display transformability

<i>Explanation</i>	<i>Size</i>	<i>Order</i>	<i>Value Space</i>	<i>Datatype</i>
A characteristic of a resource display that can be modified.	0 ... *	Unspecified	font size, font face, foreground colour, background colour, cursor presentation, highlight presentation, layout, structure presentation	Vocabulary
This element is used to communicate which components or parts of a resource can be adapted or changed to meet the needs of the user.				

Vocabulary Recommendations

More than one vocabulary entry may be selected. Choose the vocabulary elements which apply to the resource.

The controlled vocabulary for this element consists of the following:

font size: The physical dimensions of visible characters including the spacing between them.

font face: The design characteristics of a set of visible characters including such distinctions as serif and sans serif.

foreground color: The color of the top layer of graphics or text, including the contrast color against which text is made visible.

background color: The color against which significant objects and text in content are made visible.

cursor presentation: The design characteristics of the visible cursor.

highlight presentation: The identification of selected content by imposition of a color-significant background.

layout: The order, relationship and combination of content components of a resource including when a resource is being presented in an auditory, tactile or textual mode.

structure presentation: The identification of items of content within a resource that allows for different types of content to be displayed differently, including when headings can be visible in large font or otherwise, or pronounced in a low tone or otherwise.

Example

Display Transformability:
font size
