

### 1.13.7 education level

<i>Explanation</i>	<i>Size</i>	<i>Order</i>	<i>Value Space</i>	<i>Datatype</i>
Audience education level.	0...*	Unspecified	Repertoire of ISO/IEC 10646-1:2000.	CharacterString
Enter an appropriate education level, in free text, for the alternate resource.				
Note that the Dublin Core educational extension includes education level. DC defines education level as, "A general statement describing the education or training context. Alternatively, a more specific statement of the location of the audience in terms of its progression through an education or training context".				

#### Vocabulary Recommendations

Although this element is free text, it is recommended that implementers use consistent terms. For example, if your implementation uses "Grade 6" to indicate the education level, do not use alternatives such as "6th Grade".

#### Example

Education Level:

undergraduate university

#### XML Example

```
<accmd:education level>undergraduate university</accmd:education level>
```
